Brucellosis (The Corps Disease)
Col E E Vella
MD, FRCPath, L/ARAMC
Reader in Pathology, Royal Army Medical College, Millbank

SUMMARY: Quotations from the many parts played by British army doctors interpreting the various facets of the anthropo-zoonosis Brucellosis, a disease which itself (as well as the generic name of its etiologic agent) is indeed named after one of them.

PROLOGUE
1904
Major S Glen Allen
"as it was owing to the perserverance and acumen of an RAMC officer that the real cause of the fever was first discovered . . . and as it is also due to the work of the former Professor and Assistant Professor of Pathology at Netley, that we possess the method of serum diagnosis, Mediterranean fever may be considered in a great degree as the special property of our Corps."

CLINICAL
1859
Assistant Surgeon J A Marston
Report on Fever (Malta) Army Med Department

1879
Surgeon Major H Veale
Assistant Professor of Military Medicine
Report on the cases of fever from Cyprus, Malta and Gibraltar
"Is it a specific disease? That it is not our entire fever appears certain, that it is not malarial fever seems proved by its absolute resistance to quinine that it is not relapsing fever may be concluded from the fact that no spirilla have been found in the blood, and that it is not dengue . . . ."
Fig. 2 Maj H Veale (a)

1897
Surgeon Captain M Louis Hughes
Mediterranean, Malta or Undulant Fever

‘An endemic pyrexial disease, having a long and indefinite duration, an irregular course with an almost invariable tendency to undulatory pyrexial relapses. Characterised by constipation, perspirations, neuralgia. Accompanied by swelling, effusions of the joints and other rheumatoid symptoms.’

ETIOLOGY
1887
Surgeon Captain David Bruce

‘On placing the slide under magnifying power of 500 diameters, the field of the microscope was literally crowded with myriads of micrococci dancing about in the most active manner.’

DIAGNOSIS
1897
Army Professor of Pathology Almroth E Wright
Assistant Professor of Pathology Surgeon Major D Semple

‘By this method the blood of the patient who is suffering, or who has suffered, from a continued fever is tested in turn with any pathogenic microorganisms which are casually associated with typhoid fever and Malta fever.’

Fig. 3 Capt (later Brevet Col) F Smith (e)

Army Professor of Pathology Almroth E Wright
Assistant Professor of Pathology Surgeon Major D Semple

‘On the employment of dead bacteria in the serum diagnosis of typhoid and Malta fever

The utility of the method of serum diagnosis of typhoid and Malta fever has now been so firmly established and the techniques of the method is now so simple that this method of diagnosis will probably be everywhere employed by clinicians’.

PROPHYLAXIS, EVEN!
1897
Army Professor of Pathology Almroth E Wright
Assistant Professor of Pathology D Semple

Remarks on vaccination against typhoid fever

‘Comparative experiments on monkeys inoculated
with dead and living cultures of Malta Fever have led us to believe that dead cultures in suitable doses give quite as effectual an immunity as living cultures.'

Colonel Sir William Heaton Horrocks KCMG CB

(a) His work on Malta Fever finally and completely proved that goat's milk is the chief factor in its spread.
(b) In World War II was Chairman of the Anti-Gas Committee and thus played a conspicuous part in some of the major episodes of that war; gave his name to the Test Case for Water Supplies known universally as the Horrocks' Box.
(c) Editor of this journal for an unbeatable, unrepeatable period 1908-1944.

Fig. 4 Lt Col Sir David Semple (f)

EPIDEMIOLOGY

1905

Major W H Horrocks, Captain J C Kennedy

Mediterranean Fever Commission Reports

On July 18 1905 the chairman received preliminary notes showing:

(a) One or more apparently healthy goats in every herd are excreting Micrococcus melitensis in their milk and urine.
(b) 50% of goats in Malta react to Mediterranean Fever when examined by the serum agglutination test.

EPILOGUE

Bruce and the Microbe

"David found a little germ
Its name of course, you know:
For everywhere that David goes
That name is sure to go.

He found it in a spleen one day
and raised a cultured stock:
"With you," he said, "I'll demonstrate
The postulates of Koch."

Fig. 5 Colonel Sir William Heaton Horrocks KCMG CB.
OBSERVATIONS
(a) Gave the name Rubella to German Measles.
(b) Served on the Mediterranean Fever Commission
(c) Bruce: Brucellosis. Brucella melitensis. Trypanosoma brucei.
(d) Introduced prophylactic Typhoid vaccination into army practice and vaccino-therapy into civilian practice.
(e) Made history by rising from the ranks to medical officer status.
(f) Internationally famous for his Semple (modified Pasteur-type) Rabies Vaccine.
